

# Aeon Balanced Prescient Fund

## **Fund Description**

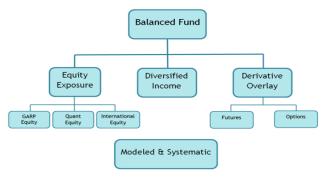

Aeon Investment Management's equity investment style is that of Growth At a Reasonable Price (GARP). We also utilise our in-house currency model and Fear & Greed Index for foreign asset allocation. Aeon Balanced Prescient Fund's investment strategy encompasses active asset allocation and active management of underlying equity and fixed income assets.

Investors should consider the Aeon Balanced Prescient Fund where they have a long term horizon (3 years or longer), and are looking for capital growth with foreign equity exposure.

Investment Objective	<ul> <li>The Aeon Balanced Prescient Fund seeks to achieve:</li> <li>Inflation beating returns by investing in the full spectrum of domestic and foreign equity and fixed income markets</li> <li>Provide investors with stable income and modest capital appreciation in the long run</li> <li>Manage risk through disciplined portfolio construction</li> <li>Employ low cost trading techniques</li> </ul>
Investment Philosophy	The Aeon Balanced Prescient Fund provides clients with a 90% downside capital protec- tion and attempt to remove emotions of investing. It utilizes a systematic return model- ing process and a disciplined investment methodology. The balanced fund strategy recog- nizes that equities have more upside potential than fixed income and over the long term, equities have proved to be a superior inflation hedge. There is also increasing long term uncertainty of bond risk given global monetary and fiscal expansion.

Equity stock universe long positions are based on Growth At Reasonable Price. Significant inefficiencies can occur in equity valuations due to market participants having excessive optimism or pessimism regarding the outlook for the market or individual companies. The over allocation of capital to a certain investment style (growth or value) can also lead to inefficiencies in the market price of securities. We look to capitalize on these inefficiencies by buying companies with long term sustainable growth rates greater than that implied by the company's market valuation.

Our focus on long term sustainable growth rates make us long term investors in the business.

#### Investment Process

We combine our implied growth methodology and GARP style to invest in undervalued companies, regardless of whether they are classified as 'growth' or 'value'.

Our process consists of five key elements:

# **Aeon Balanced Prescient Fund**

	<ol> <li>Calculation of the earnings growth rate implied by the current market valuation of the company.</li> <li>Fundamental analysis and modelling of key drivers in order to determine whether the long term sustainable growth rate is attractive relative to the implied growth rate.</li> <li>Use fundamentally and technically based Aeon Systematic Model (Value factors such as PE, Growth factors such as EPS, technical factors such as Relative Strength Index and assumption of mean rever- sion) to improve stock selection and use technical analysis to improve stock timing</li> <li>Risk based exposure protection using derivatives to protect capital value</li> <li>Construction of the portfolio in a risk managed framework</li> </ol>	
tisk Nanagement Nd Return Nodelling	The portfolio is structured with overweight and underweight positions relative to the benchmark which is dependent on the gap between the implied and sustainable growth rates. A real time model monitors the portfolio positions, and the effect of the sector and stock selection decision on the performance relative to benchmark. The risk management framework encourages diversi- fication and reduces the risk of significantly underperforming the benchmark.	IS
	Portfolio returns are modeled in a range of market scenarios to ensure maximum possible upside is captured while maintaining downside protection.	ē
trategy enefits	Growth at Reasonable Price investing seeks to combine the best of growth and value investing, by buying companies with long term sustainable growth rates greater than that implied by the company's market valuation. In addition, technical analysis is used to improve trade executions.	•
	A consistent implementation of our philosophy will lead to outperformance of the benchmark (STEFI +3%) regardless of the dominant investment style.
